

Person-centred care stakeholder consultation series

Meeting 4 – 22 June 2023

What are the core elements and mechanisms of person-centred care within the HIV response?

Instructions for participants

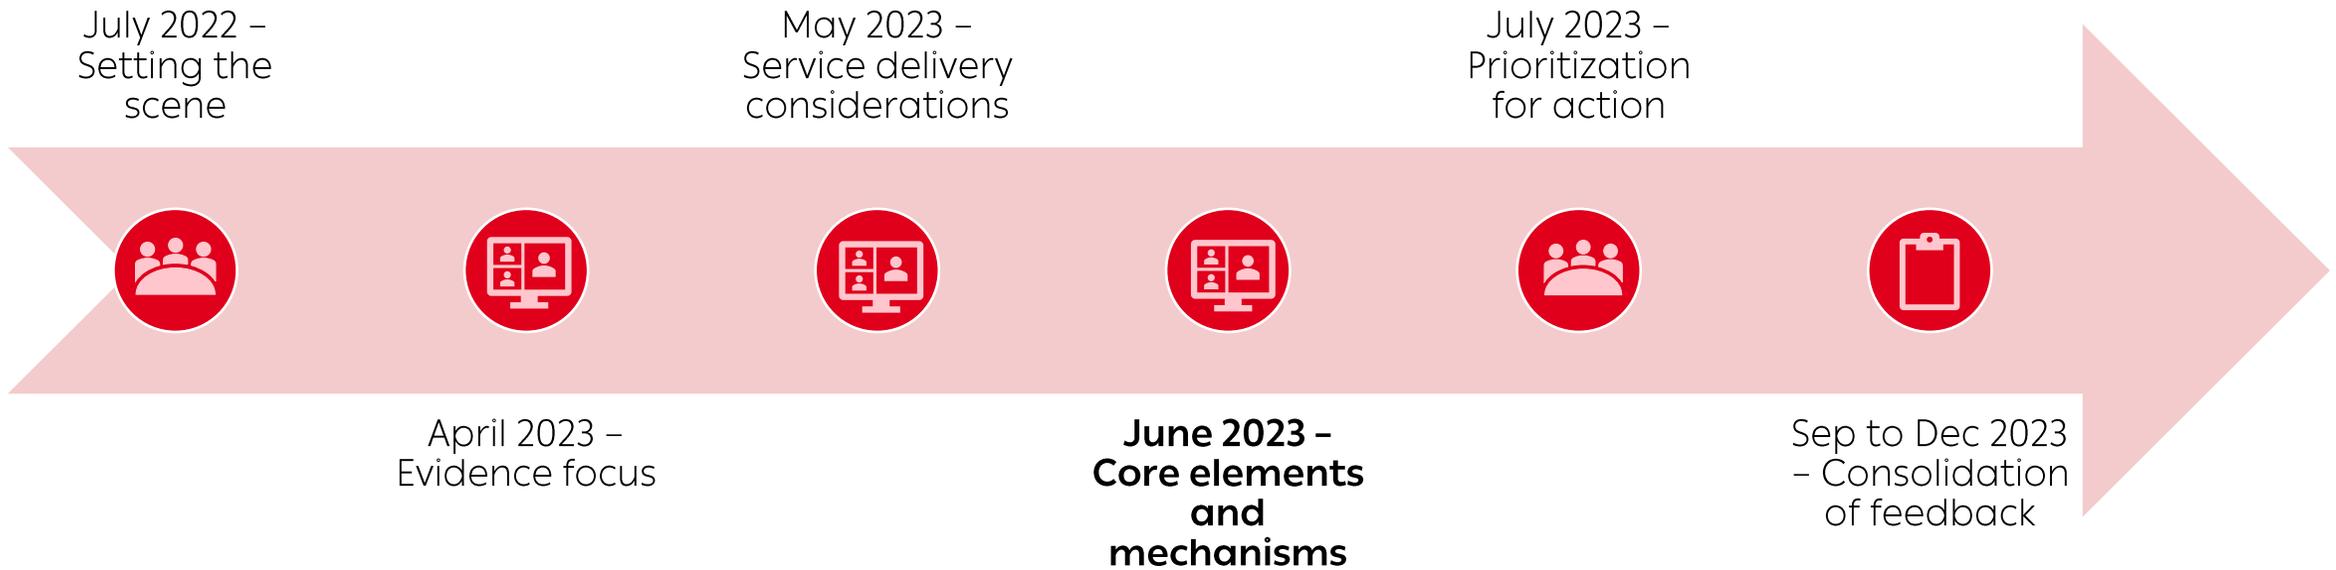

- Please ask questions to presenters using the JamBoard.
- The chat is for any technical issues or general questions
- Slides will be sent to all participants and posted on the IAS website
- The Q and A and breakout group time is your chance to speak up! Please stay on mute during presentations.

PCC stakeholder consultation objectives

1. Provide a platform for exchange on the concept of person-centred care in the HIV response.
2. Develop a joint consensus statement including recommendations for different groups of stakeholders as they work towards realizing the full potential of person-centred care for the HIV response.

PCC stakeholder consultation series

Recap of previous meetings in the series

- PCC must acknowledge contexts, identity and complex clinical needs
- Healthcare provision must be informed by client experiences and needs,
- Services that are community-led and community-based and supported by trained providers and peer navigators are essential
- Funding, targets, policies and access to technology are key enablers

July 2022 –
Setting the
scene

- PCC frameworks exist
- Evidence within the HIV response is building
- One size does not fit all
- Community is crucial
- The level of integration of services can expand over time
- Investment in health care providers key
- Long-term success requires a focus on changing needs over the life-course
- Barrier of stigma and discrimination

April 2023 –
Evidence
focus

- Client choice requires access to a mix of options
- DSD 2.0 will see further integration of health care services
- Integration is needed all all levels of the health care system
- Increased training, incentives and investment in the health care workforce is crucial
- Deliberate policies, monitoring and mentorship is needed from government, donors and implementers

May 2023 –
Service delivery
considerations

Meeting 4: 22 May 2023

Meeting objective

To review and prioritize the core elements and mechanisms of person-centred care within the HIV response for different population groups while ensuring that individual client needs are at the centre.

Discussion questions

What are the core elements and mechanisms of person-centred care for people living with or affected by HIV related to:

1. HIV prevention?
2. HIV testing and linkage to care?
3. HIV treatment and integrated healthcare needs?
4. Quality of life?

How does this differ when considering the specific context of individuals from different population groups?

What are the opportunities to implement person-centred care, even within current resource constraints?

Order of Events

1. Welcome and introduction
2. Presentations (40 mins)
 - Homelessness and HIV
 - The whole person / provider relationship
 - Community-led monitoring
 - PCC consensus statement in Australia
3. Q and A with presenters (10 mins)
4. Breakout group discussions (15 mins)
5. Report back and moderated discussion (20 mins)
6. Closing remarks

Moderator:

Marlène Bras,

Presentations

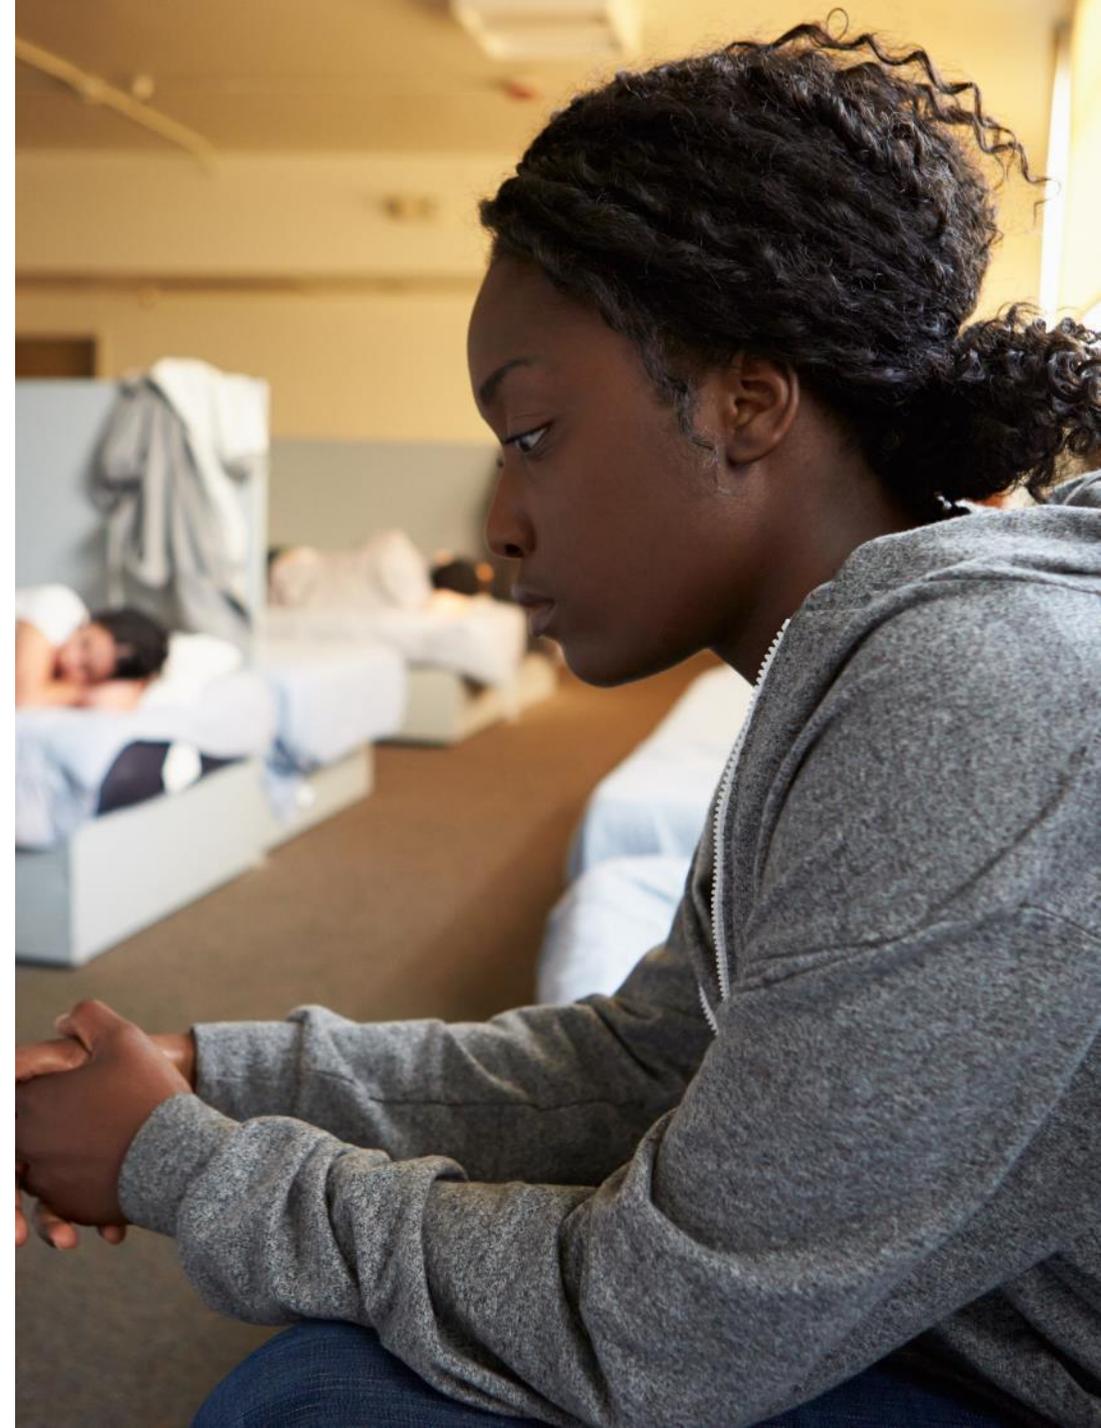

Put people first: Enabling access to quality integrated HIV services for people experiencing homelessness

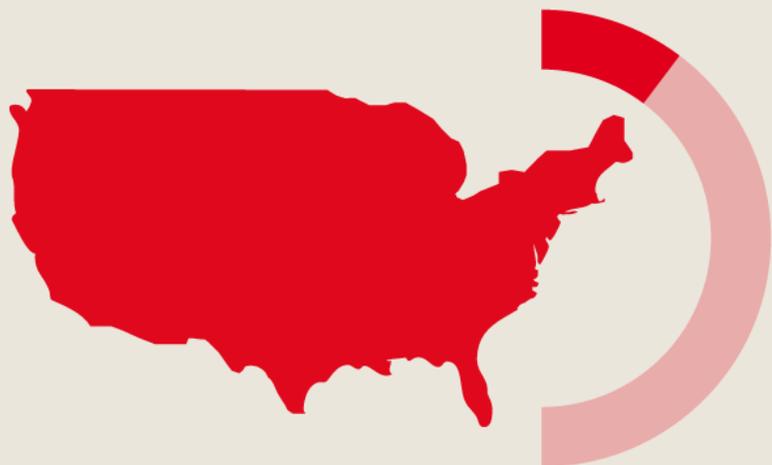

Rodenie Arnaiz Olete, MSc, RN

- IAS Person-Centre Care Advocate
- PhD Student, National Cheng Kung University
- Technical Consultant for Grants & Research. Sustained Health Initiatives of the Philippine (SHIP)
- Clinical Instructor III, College of Nursing, Iloilo Doctor's College

Homelessness and HIV

- Intersectional barriers to health systems
- Models of good practice
- Recommendations for key stakeholders

In the United States in 2020,

17%

of people diagnosed with HIV
experienced homelessness
or inadequate housing

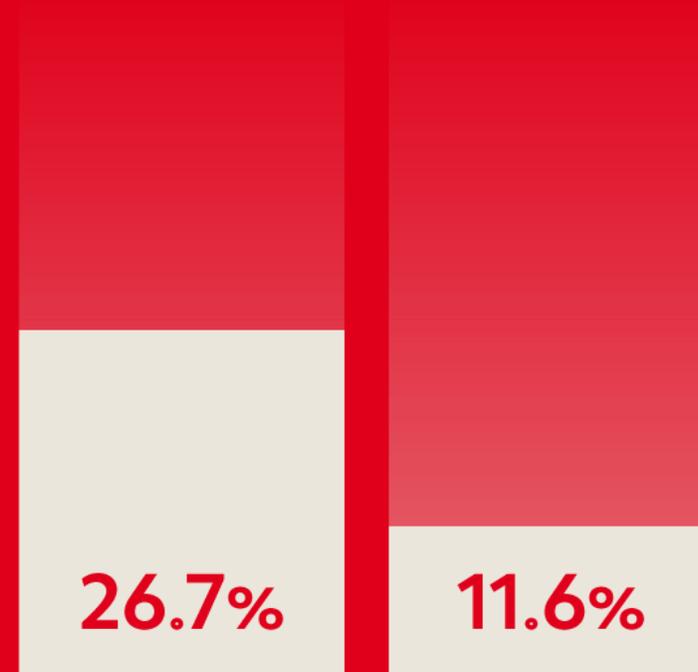

Source [1]

A study of 1,057 people experiencing homelessness in Jamaica found that HIV prevalence was

2x

as high **among women**
experiencing homelessness
than among men

Source [2]

#housingHIV

“

Someone held my hand when I lost hope. Now, I'm doing the same for my fellow sex workers. Even within these hotspots, we can still take our ART and attain viral suppression.

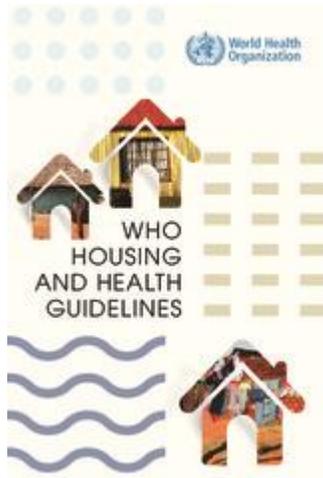

Annie

#housingHIV

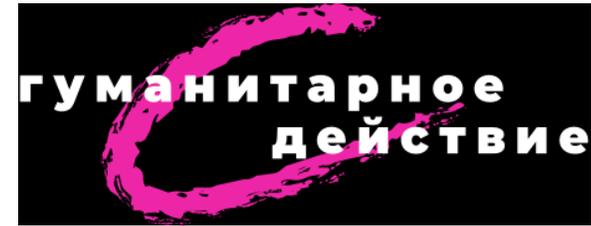

My outreach programme for injecting drug users allowed me to get support and to access HIV services. It has been the only support around, and really, it literally provided a lifeline for me.

 IAS

Omar

A selection of good practice models

Recommendations for policy makers

- Be inclusive
- Collaborate with experts by experience
- Invest in affordable housing
- Universal health coverage
- End criminalization

Recommendations for service providers

- Use harm reduction principles
- Use trauma-informed approaches
- Rethink eligibility criteria
- Enhance capacity for case management
- Focus on peer leaders
- Develop robust safeguarding practices
- Nourish community linkages

Recommendations for surveillance teams and researchers

- Invest in surveillance
- Capture data on community interventions
- Research early intervention
- Engage multidisciplinary groups
- Determine research gaps
- Promote good practices

Recommendations for advocates

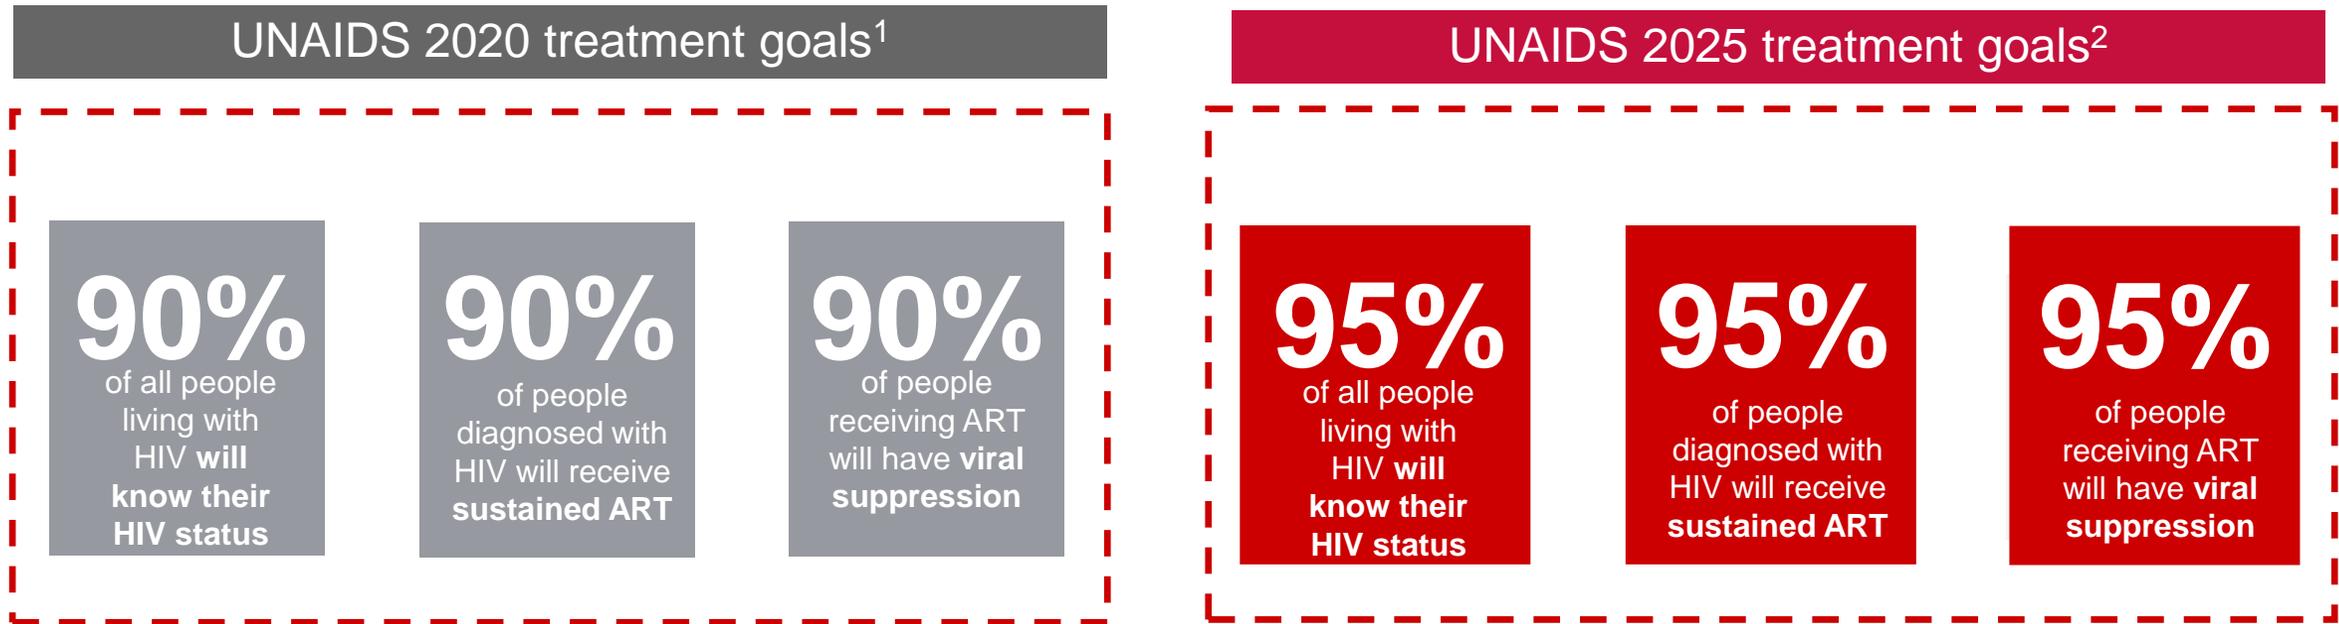

- Include "experts by experience"
- Facilitate client empowerment
- Raise awareness

Status Neutral Testing and the “Whole Person” to Provider Relationship for Long Term Success in HIV and Prevention

Lisa Serman, MD, MPH
ED Global HIV Medical Affairs, Gilead Sciences

The continuum of care: A fourth goal has been proposed focusing on improved HRQoL¹

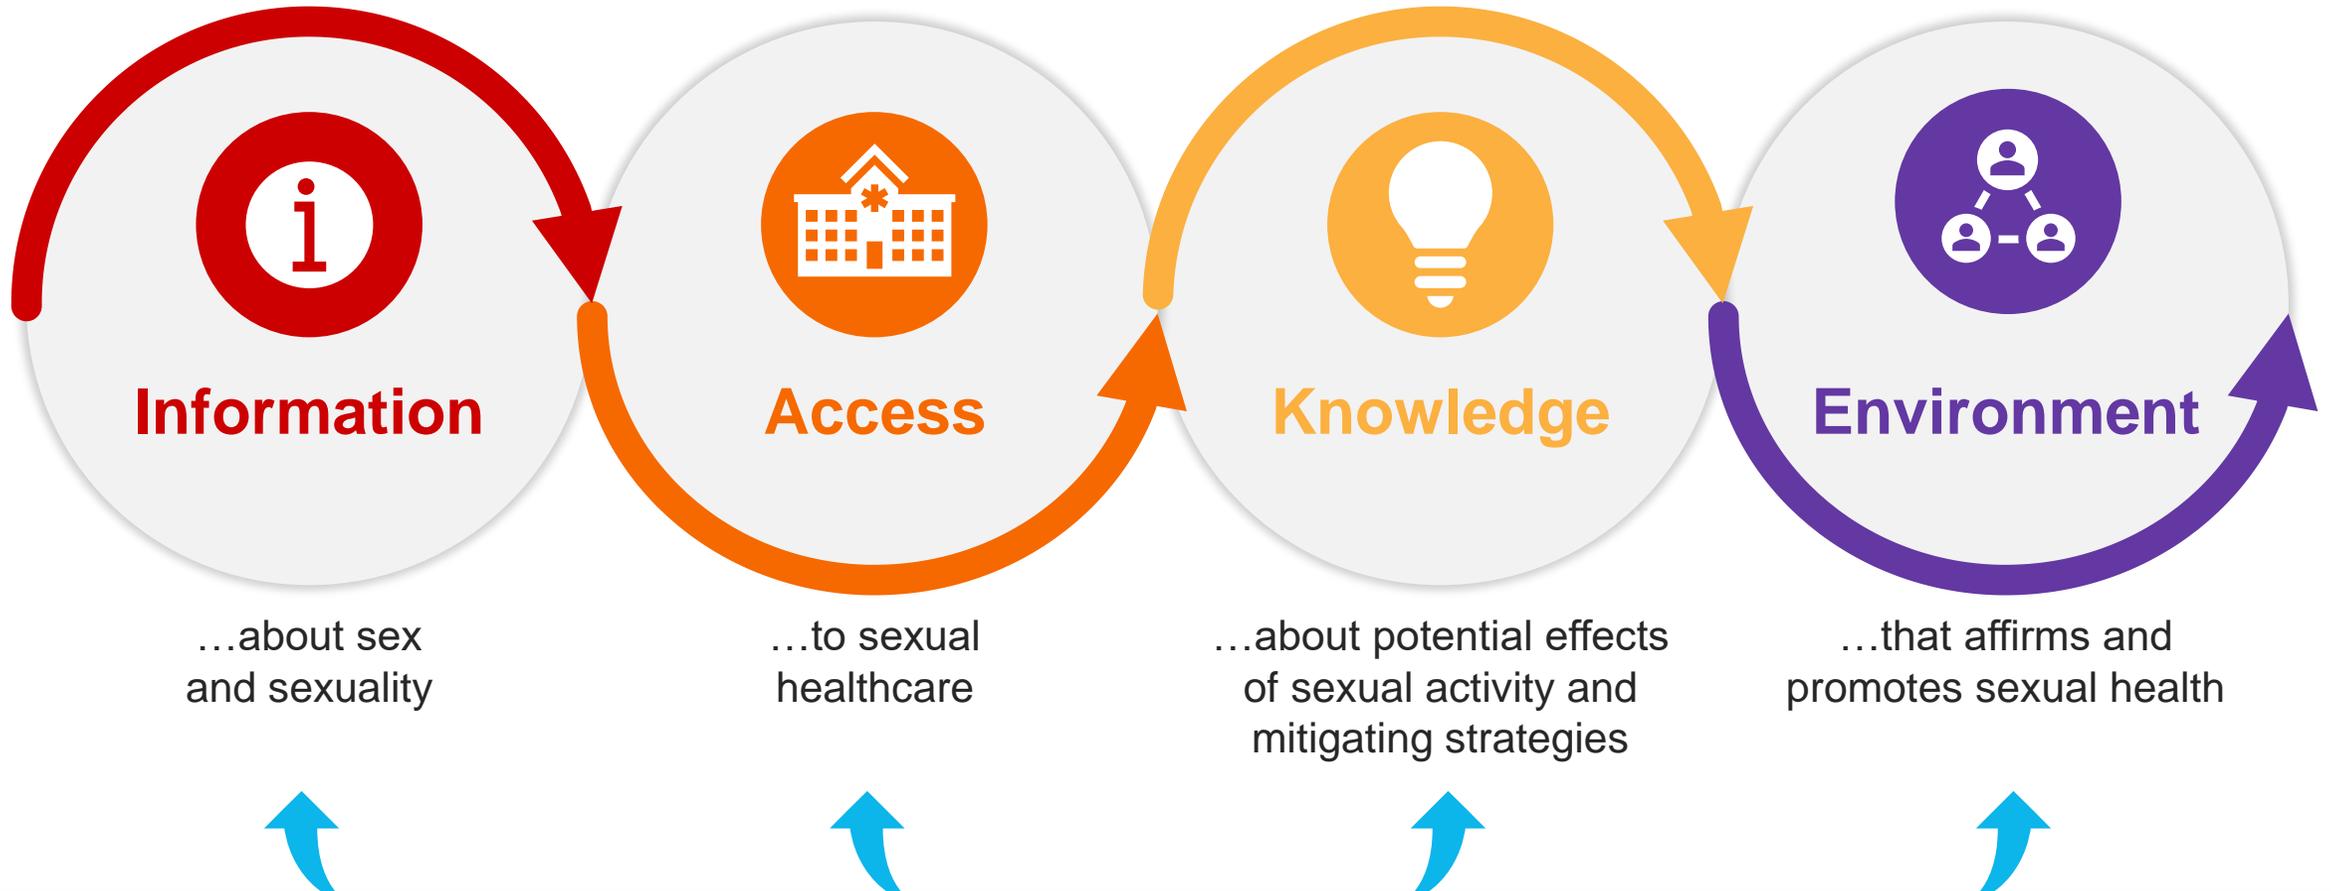

Proposed fourth goal: Good HRQoL^{1,3}

In order to meet these treatment goals, an integrated, outcomes-focused and person-centred approach is required for people living with HIV⁴

ART, antiretroviral therapy; HIV, human immunodeficiency virus; HRQoL, health-related quality of life; UNAIDS, Joint United Nations Programme on HIV/AIDS.

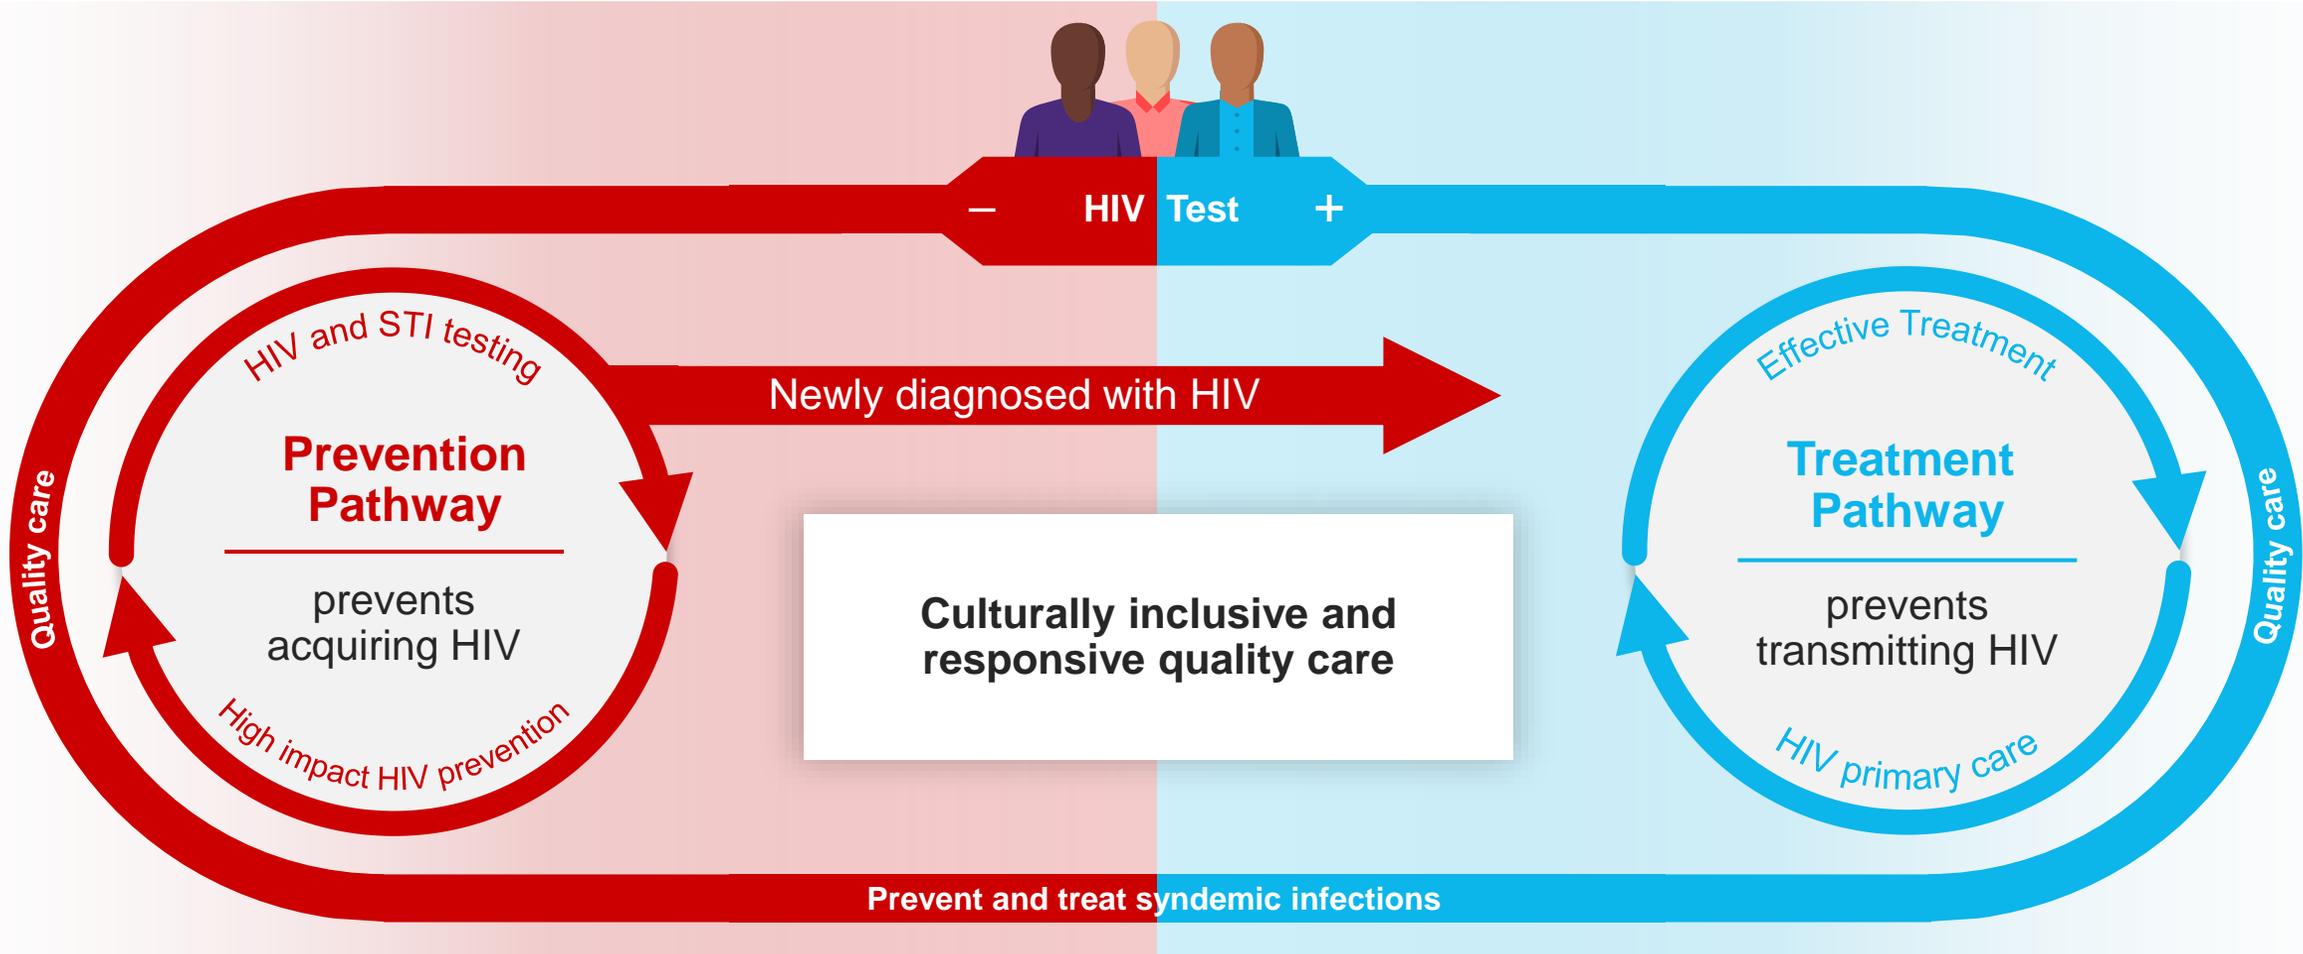

1. Lazarus JV, et al. *BMC Med.* 2016;14:94; 2. Prevailing against pandemics by putting people at the centre. World AIDS Day Report. UNAIDS. 2020. Available at: https://aidstargets2025.unaids.org/assets/images/prevailing-against-pandemics_en.pdf (Last Accessed: July 2022); 3. Safreed-Harmon K, et al. *Lancet HIV.* 2019;6(12):e869–77; 4. HIV Practice. From Patient Education to Patient Empowerment. Available at: www.hivpractice.com/From-Patient-Education-to-Patient-Empowerment/ (Last Accessed: July 2022).

Sexual health and well-being are dependent on:

HCPs can contribute positively to each of these

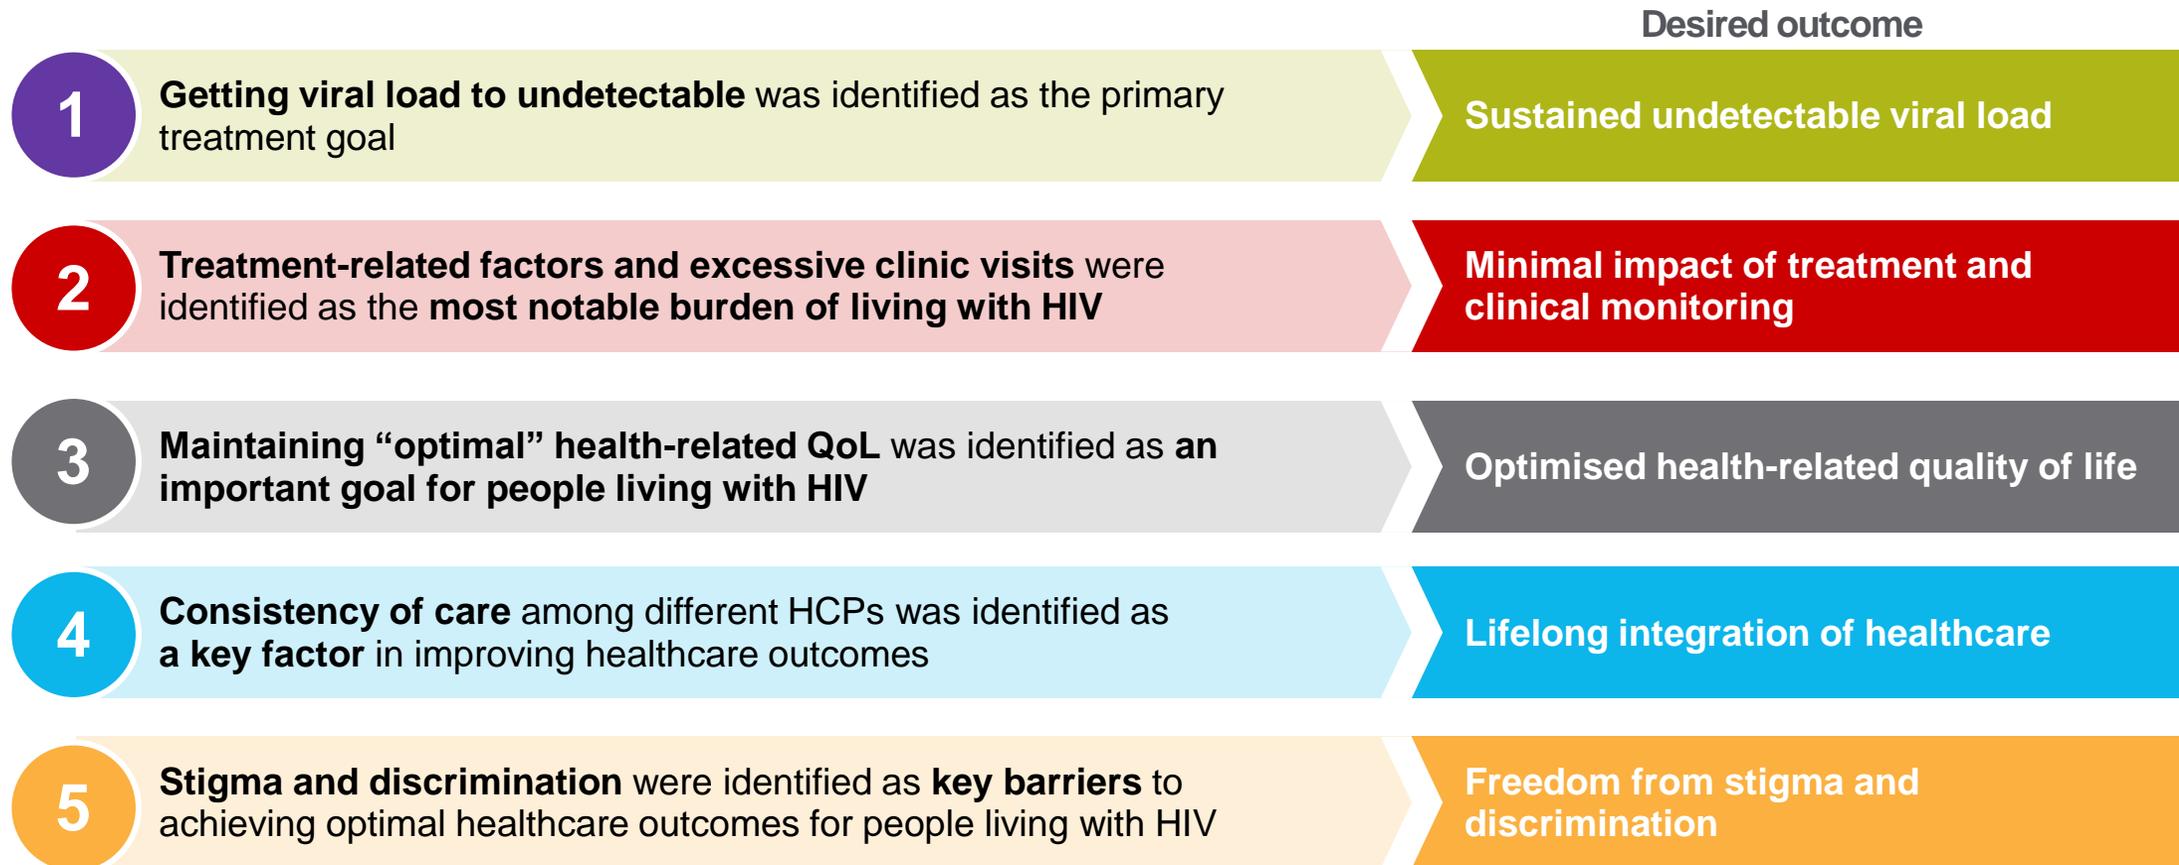

A status neutral and 'whole-person' approach is essential for optimal care

**Regardless of HIV status,
quality care is the foundation of HIV prevention and effective treatment**

Figure based on materials developed by the CDC. <https://www.cdc.gov/hiv/policies/data/status-neutral-issue-brief.html> (accessed March 3, 2023). Use of the material, including the link on the CDC website, does not constitute endorsement or recommendation by the CDC

Five pillars were identified by the expert panel that support the vision for LTTS and define the framework

HIV management goals have shifted to meet the evolving needs of people living with HIV^{1,2}

Previous HIV management goals¹

Achievement of viral suppression

Restored/preserved immunologic function

Prolonged duration and quality of survival

Reduced HIV-associated morbidity

Prevention of HIV transmission

Current HIV management goals³

Rapid treatment initiation

Treatment simplicity to reduce DDIs and improve adherence

Long-term efficacy without resistance

Improved short- and long-term safety profile

Improved quality of life and reduced stigma

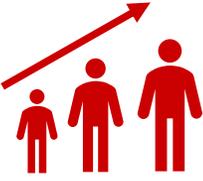

There has been a shift from going beyond an undetectable viral load to optimising long-term health and HRQoL, as well as supporting people living with HIV throughout their lifetime^{4,5}

DDI, drug-drug interaction; HIV, human immunodeficiency virus; HRQoL, health-related quality of life.

1. DHHS Panel on Antiretroviral Guidelines for Adults and Adolescents. 2021. Available at: https://clinicalinfo.hiv.gov/sites/default/files/guidelines/archive/AdultandAdolescentGL_2021_08_16.pdf (Last Accessed: July 2022); 2. Saag MS, et al. *JAMA*. 2020;324:1651–69; 3. Antela A, et al. *J Antimicrob Chemother*. 2021;76(10):2501–18; 4. Lazarus JV, et al. *BMC Med*. 2016;14:94; 5. Prevention Access Campaign. Available at: www.preventionaccess.org/about-introduction (Last Accessed: July 2022).

A person-centered approach is key for the care of people living with HIV^{1–5}

Several factors should be considered by people living with HIV and their HCP when initiating or switching ART:^{1–5}

						
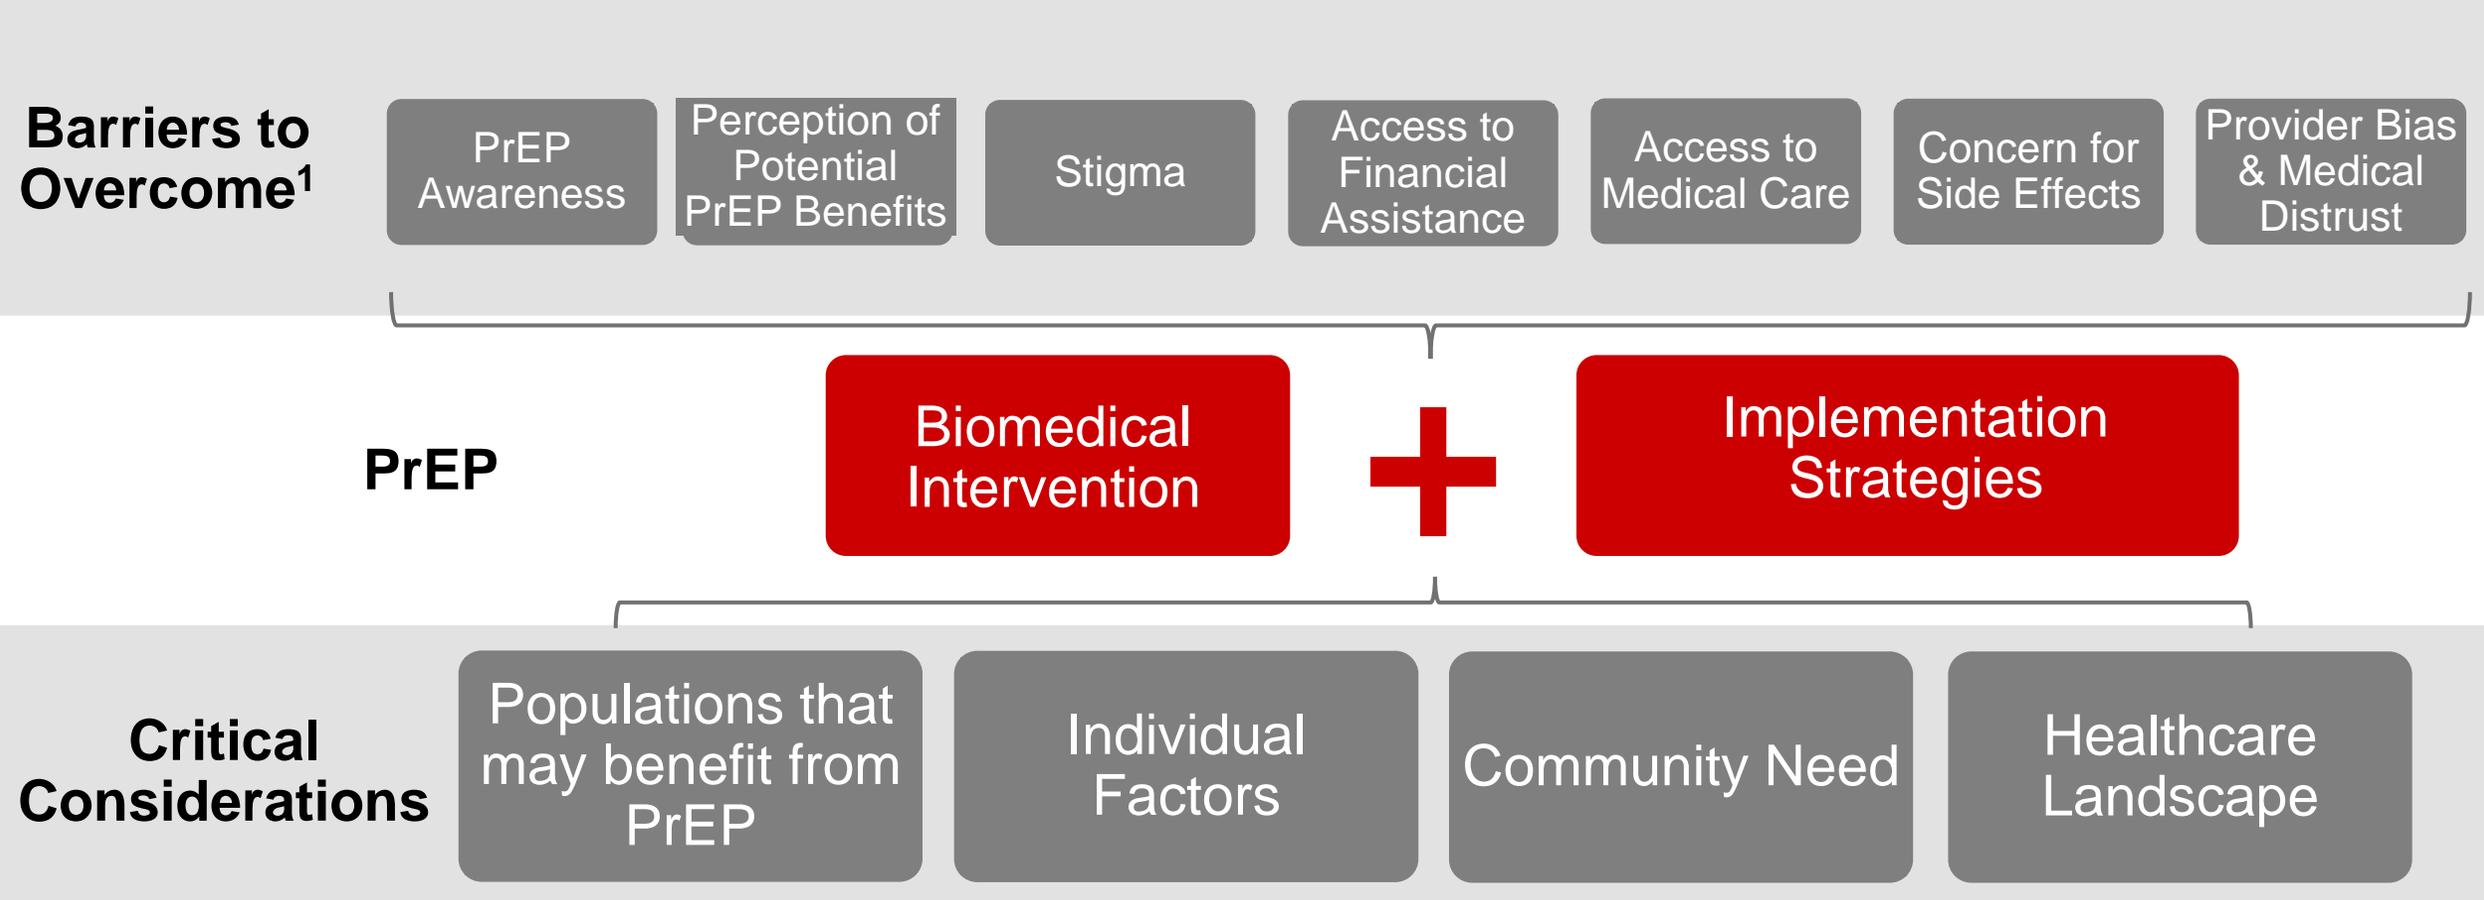

Age	Sex	Pregnancy	Medical history	Lifestyle	Drug use	Laboratory evaluations
						
Comorbidities	Drug-drug interactions	Regimen tolerability	Preference	Readiness	Socio-economic background	Mental and physical health

Taking a person-centered approach can help people living with HIV better understand the challenges ahead and enable them and their HCP to take the necessary steps to achieve long-term good health³

ART, antiretroviral therapy; HCP, healthcare professional; HIV, human immunodeficiency virus.

Tailoring HIV Prevention Implementation

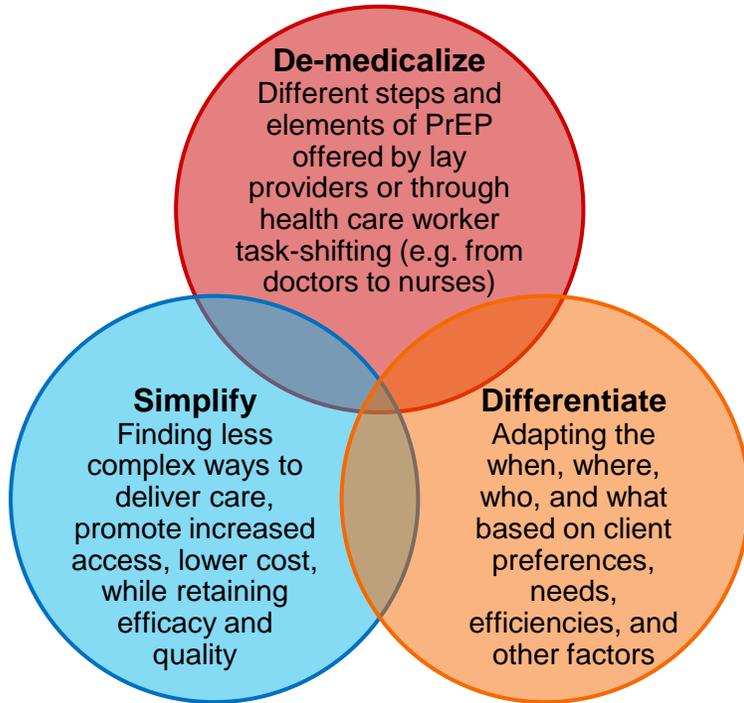

Improving PrEP uptake requires considering the needs of both the individual and community to overcome key barriers. PrEP as an HIV prevention strategy is more than just the medicine: tailored implementation may help reach those who may benefit.

1. Mayer, K.H., Agwu, A. & Malebranche, D. Barriers to the Wider Use of Pre-exposure Prophylaxis in the United States: A Narrative Review. *Adv Ther* (2020). <https://doi.org/10.1007/s12325-020-01295-0>

Bringing PrEP to the People: Democratizing Access to PrEP Through Differentiated Delivery Before, During and After COVID-19

- Globally, >925,000 people took PrEP medication at least once by 2020 (31% of 3M people goal)
- Adapt the building blocks of differentiated PrEP:
 - When: Longer PrEP medication refills
 - Where: Decentralized and closer to home (drop-in center, pharmacy, at home, community-led)
 - What: PrEP medication refills and comprehensive health services
 - Who: support by peers, clients, nurses, pharmacists, community health workers
- Diverse options and diversified delivery
 - Mobile PrEP
 - Online PrEP
 - TelePrEP
- Guidance on implementation of future PrEP delivery modalities is needed

**Innovation prompted by COVID-19 is a silver lining for PrEP
New technology allows for differentiated access and client-centered approaches**

Innovation as a key component of Person Centred care

Focus on stigma and discrimination to tackle HIV inequities at their root cause to ensure those most affected and at-risk populations are not left behind

Additional person-centred therapies to provide further options for HIV-related care

Remove structural and systemic barriers to accelerating the progress of ending the HIV epidemic

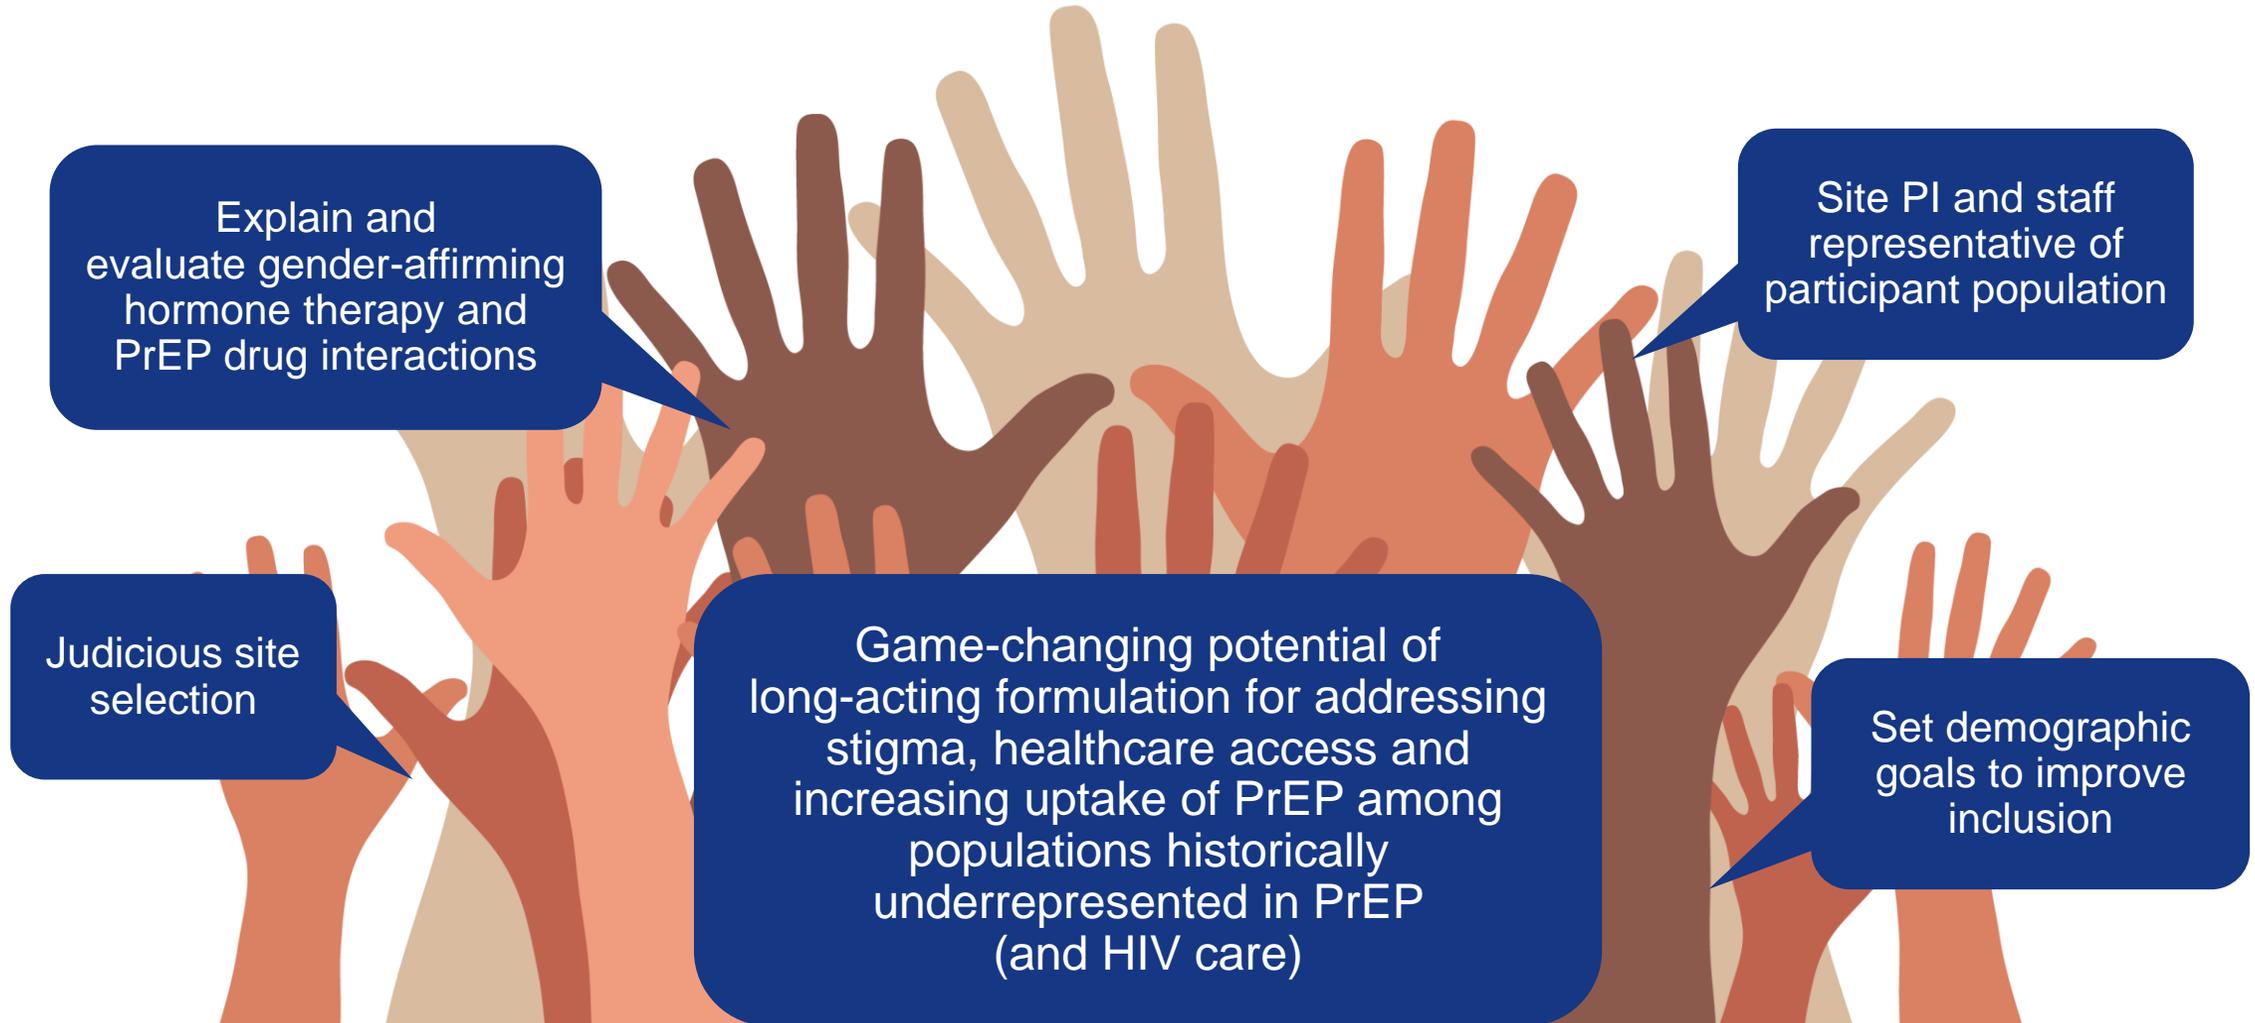

Paradigm shift in health systems' approach to HIV prevention, care, and service delivery - with broader and holistic focus across all sectors

Ensuring broad and open access to innovation to address inequities in access

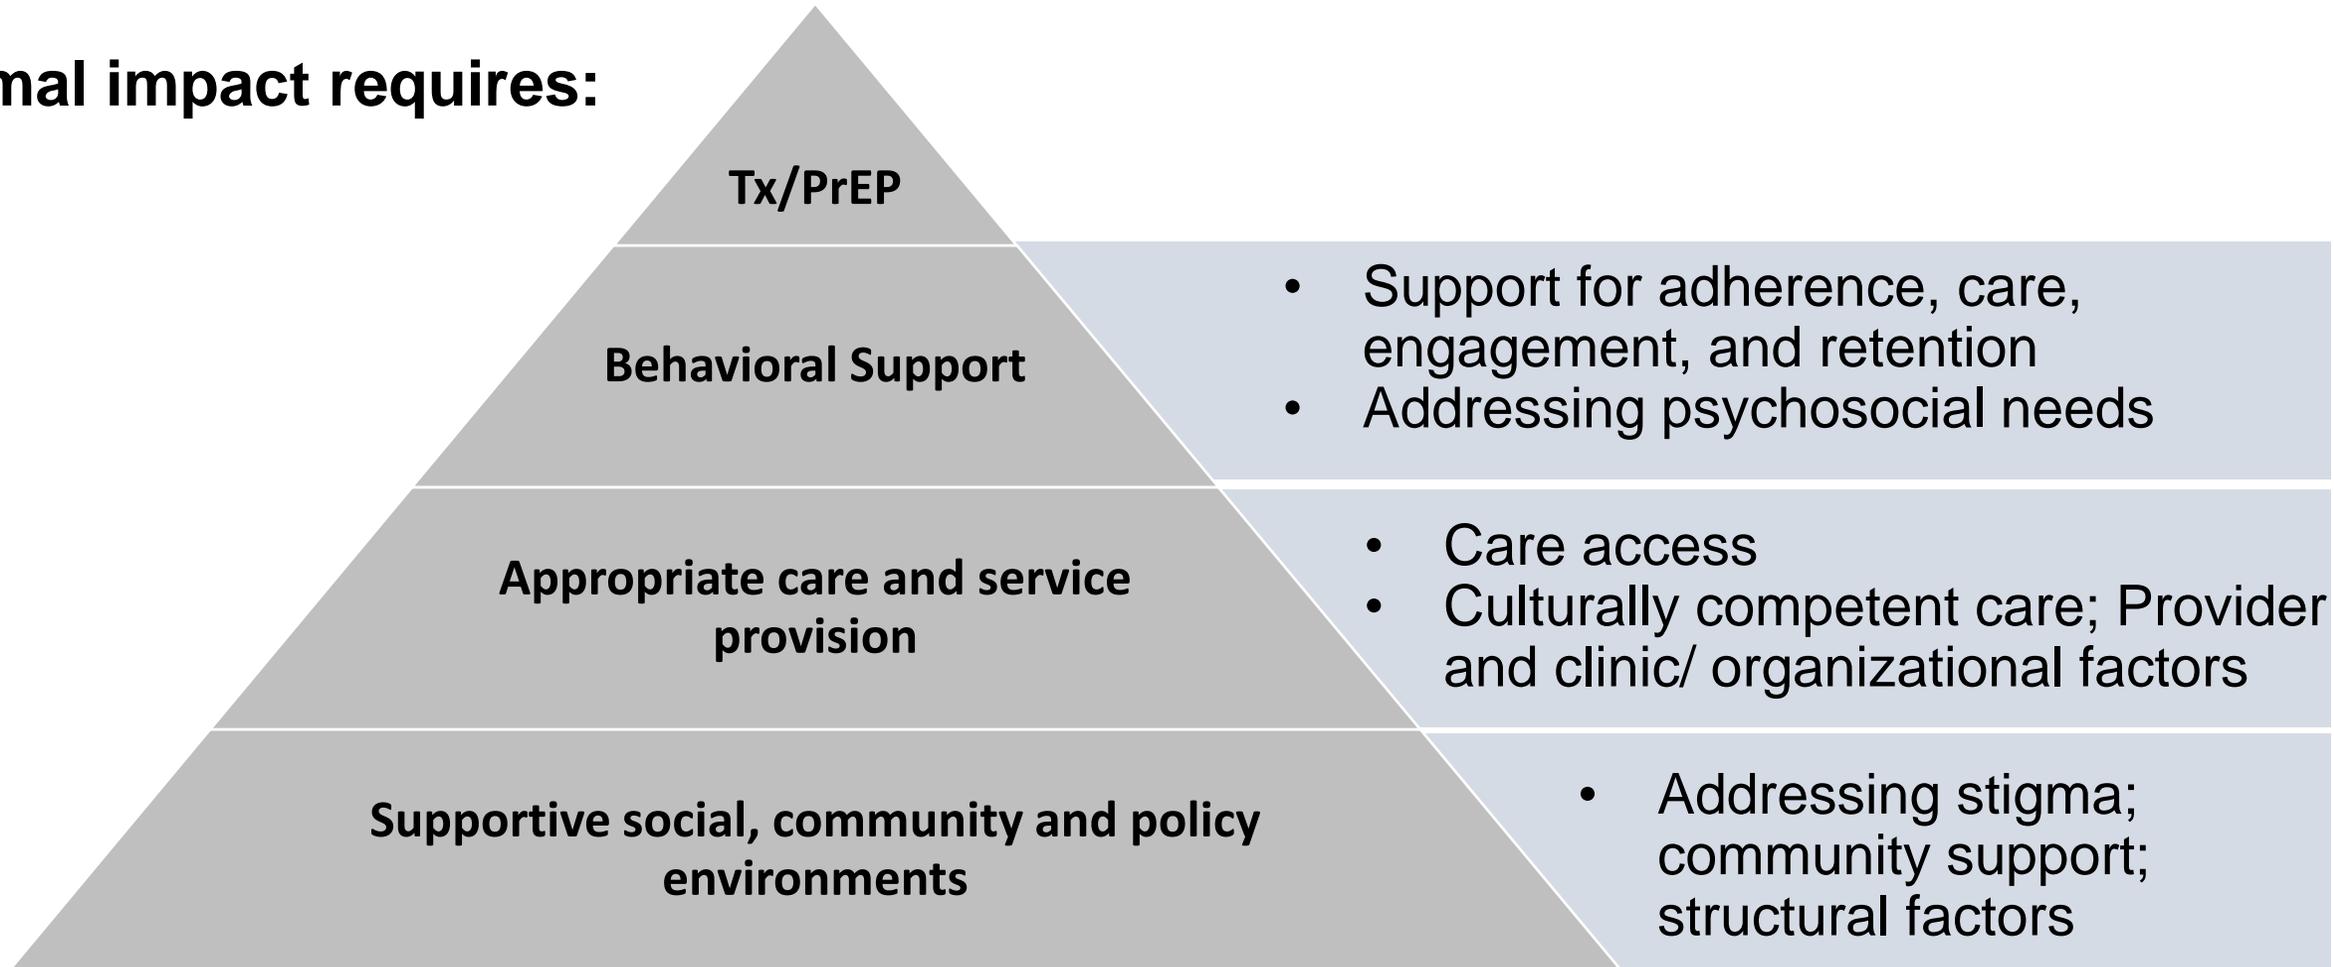

Diversity and Inclusion in Clinical Trails

The Foundations for HIV Treatment (and PrEP) Success

Optimal impact requires:

A close-up portrait of a man with short, dark, curly hair and a light beard. He is wearing round, reddish-brown glasses and a mustard-colored jacket over a dark shirt. The lighting is warm and directional, coming from the side, casting soft shadows on his face. The background is a plain, light-colored wall with a large, dark, out-of-focus logo on the left side.
